# ART maintenance manual

From art-decor.org

This article or section **is in the middle of an expansion or major restructuring and is not yet ready for use.** You are welcome to assist in its construction by editing it as well.

## ART user roles

This section describes the user roles that are used in ART, with the corresponding groups the user should have permission for.

The roles in ART and corresponding group permissions:

- Project editor - Groups: decor, editor, issues. Besides these groups the user should also be listed as author in the project section in the decor file.
- Project author - Groups: decor-admin (the rest is the same as 'Project editor'). This role enables extra tabs in the project tab: Ids, Status, Compilations and MyCommunity.
- Issue editor - Groups: decor, issues. Besides these groups the user should also be listed as author in the project section in the decor file.
- Refset editor - Groups: terminology, editor. Besides these groups the user should also be listed as author in the project section in the refset file.
- Testing/SOAP interaction tester - Groups: decor, xis. Besides these groups the user should also be listed in a testaccount.
- Read-only view - No groups necessary.
- Database admin - dba.

In order to give permissions you must be logged in as database admin, and choose the menu 'Application' -> tab 'Users'.

The following groups are available for users:

- dba - Creating users, DECOR projects, etc.
- debug - Show the Orbeon forms debug information. Do not use, except for ART-developers.
- decor - General permission to write to DECOR projects.
- editor - Creating, editing, deleting of DECOR objects (dataset, scenario's, valuesets).
- guest - Read-only access to data in a DECOR project.
- issues - Creating and editing of issues in DECOR projects.
- tools - Creating and editing in the OID-registry.
- xis - Access to the tab 'testing' and the underlying functionality such as uploading message instances.

How to add a user to a DECOR project: Open the DECOR project, choose the tab 'Project' -> 'Authors'. In order to perform this action you must be either in the groups: decor and editor and be named as an author in the DECOR project or have database admin permissions.
